Summary

Full-stack engineer and tech lead who ships production systems end to end — multi-tenant platforms with legal-entity isolation, real-time services, performance-tuned PostgreSQL / Redis, and mobile apps. Now leading a 3-engineer team building an AI developer-tools product, owning technical direction and delivery. PhD-trained, with a research-grade eye for performance.

Education

- PhD, Deep Learning for Medical Image Analysis — Mohammed El Bachir Ibrahimi University, Algeria, 2025
- MSc, Business Intelligence — Mohammed El Bachir Ibrahimi University, Algeria, 2024
- BSc, Computer Science — Mohammed El Bachir Ibrahimi University, Algeria, 2022

Professional Experience

Infraxcode | Tech Lead (Hybrid — Algiers / France)

June 2026 – Present

- Lead a team of **3 developers** reporting directly to the **CTO**; own **agile planning**, prioritization, scheduling, and the mentoring and growth of the team.
- Own **product discovery** and **market research**, turning early-stage concepts into shipped products across **6 rapid product-vision iterations** to reach the current direction.
- Set **technical direction** and tooling to accelerate delivery cycles; established onboarding guidelines and a standardized **AI-assisted workflow** that maximizes team productivity with **Claude Code**.
- Build the product hands-on: a **VS Code extension** and **Electron** desktop app powered by the **Claude Agent SDK**.
- Run internal **feedback analysis** to steer product direction, closing the loop between discovery, build, and iteration.

Hader | Co-founder & Full-Stack Developer

September 2025 – June 2026

- Improved performance by implementing **caching** through **Tanstack Query** and **optimistic updates** on successful API calls.
- Integrated **Firebase** crash analytics and **push notifications**.
- Architected a complex role-based web app using **Tanstack Router** and **custom role-check hooks**.
- **Dockerized** and deployed an **Odoo** instance for internal enterprise needs, using **Dokploy** on a **Hetzner Cloud VPS**.
- Implemented a scalable **REST API** service layer with **Axios** for better readability and re-usability.
- Built a responsive dashboard using **Tailwind CSS** and **Mantine**.
- Implemented dynamic filters and pagination using **Ag-Grid** and **Tanstack Query**.
- Used hybrid state management — **Zustand** for global state and **Context** for screen-scoped data — to avoid memory degradation on large datasets.
- Developed and shipped 2 **Flutter** apps to the [Play Store](#).

Ibdapro | Lead Developer

February 2025 – September 2025

- Led planning, design, and delivery of **3 projects**, including a **government-grade** platform.
- Improved **PostgreSQL** performance via **indexes** and **materialized views**.
- Implemented real-time chat using **WebSockets**.
- Migrated a legacy **Node.js / Express.js** codebase to **NestJS**, improving maintainability and scalability.
- Implemented encrypted file reads and uploads using **AES** encryption.
- Designed and implemented a responsive dashboard using **Ant Design** and **Tailwind CSS**.
- Built a **reverse proxy** routing API requests to **region-based instances**, each representing a legally separate entity.
- Implemented **Redis** caching to improve API performance on critical, high-frequency requests.
- Developed and shipped 2 **Flutter** apps to the [Play Store](#).

OiluCode | Computer Vision Research Engineer

February 2024 – September 2024

- Developed a **Java Android** app with 3D rendering using **OGRE**.
- Built **JNI** wrappers to communicate with custom **native C++ binaries**.
- Completed a computer-vision project pending **U.S. patent (63/199,424)**.
- Developed a **homography-free algorithm** for fiducial markers in **C++** running at **2–10 ms**.

Freelance / Consulting

Sarl Belmanaa | Odoo Integrator

October 2024 – November 2024

- Delivered an in-house **Odoo ERP** integration, cutting annual operating costs by **~\$38K (USD equiv.)**.

AnFashion | Consultant & Systems Migration Lead

September 2023 – February 2024

- Resolved a year-long technical conflict between the company and its development agency.
- Managed full infrastructure, reducing monthly running costs by **~60%**.
- Led a complex migration to **Magento 2**, including mail-server recovery and **.dz** domain configuration.

Research

LWCMLP for Medical Imbalance Analysis

2025 – 2026

- Designed a novel **CNN** architecture optimized for computational efficiency, improving disease classification by **7%** across multiple datasets, surpassing **SqueezeNet** in both modularity and performance.

S-Attention for Medical Datasets

2025 – 2026

- Developed a mathematical variant of the classical **attention** mechanism, improving **GFLOPs** efficiency while matching standard-attention performance.

Ablation Study on Classifier Heads (Clinical Settings)

2025 – 2026

- Ran a systematic **ablation across 5 factors** isolating how classifier-head design affects performance in clinical settings, concluding with **practical recommendations** for future practitioners.

Projects

Dive Competition — [dive-club](#)

May 2023 – October 2023

- Automated regional swimming competitions, increasing transparency and accuracy of results.

Death Note — [death-note-hackathon](#)

2023

- Integrated **OpenAI** and **DALL·E** APIs into a web app for an international hackathon (Convex / WebDevCody).

Agritech — [agritech-seminar.vercel.app](#)

May 2022

- Digitized organization and participant management for a national university seminar via a dedicated app and website.
